- Full Roof Underlayments
- Skylight Flashing
- Roof Vent Flashing
- Chimney Flashing
- Protection from Ice Dams and Wind-driven Rain
- Overall Weather & Waterproofing

The background of the advertisement features a construction worker in a blue uniform and safety gear, kneeling on a wooden roof deck. The worker is applying a roll of dark, textured underlayment. Several large rolls of different types of underlayment are shown in the foreground, including a dark, woven fabric, a smooth black membrane, and a grey, granular surface. The overall scene is set against a light, geometric architectural drawing of a roof structure.

You can stand behind your roofing projects with confidence whenever you install MFM underlayments!

Whether your project is new construction, an addition, or repair, rely on MFM Building Products for the best in underlayment technology solutions. Our family of self-adhesive, self-sealing membranes offers it all: unmatched selection, proven performance, and ease of handling and installation.

The days are long past when fully adhered underlayments were limited to key “problem” areas such as flashing, valleys, low slopes and pitches. Today’s underlayments are called upon to provide a trusted line of defense against water damage across the whole roof deck in the event the main roofing material fails. The choices are complex, involving all kinds of roofing materials, all kinds of substrates, and all kinds of climates. MFM underlayments help you match performance and cost factors for virtually every job.

**MFM is
your quality source.**

Over 40 years of research and experience are behind every product, making MFM *the* recognized innovator and manufacturer of self-adhering membranes for the construction industry. We continually test and evaluate all of our products to ensure that you're getting the best, most durable products available.

MFM has the solutions.

You'll never have to compromise cost or quality with MFM underlayment products. We give you a wide choice of solutions matched to a wide range of substrates, roofing materials, climates, and cost factors. Read on for all the details – then make *your* choices with confidence!

Premium Wind & Water Seal™

Top-of-the-line protection for any roofing job, including shingles, tile, concrete, or metal. Our best underlayment, Premium Wind & Water Seal is the ideal product for roofs where advanced underlayment protection is required. Application is easy: simply peel off the protective backing and press into place. Excellent self-sealing properties, including around nails, screws, and fasteners, and a durable, textured top surface for safe installation. Trust Premium Wind & Water Seal to maintain the integrity of your finest roofing jobs.

The background of the entire page is a collage of roofing-related images. At the top, there are several rolls of underlayment material in various colors and textures, including black, grey, and white. Below these, a black and white illustration shows a construction worker in a hard hat and safety vest, kneeling on a roof deck and applying a roll of underlayment. The worker is positioned in the lower-left quadrant of the page. The overall composition is a mix of realistic product photography and technical illustration.

MFM Wind & Water Seal™

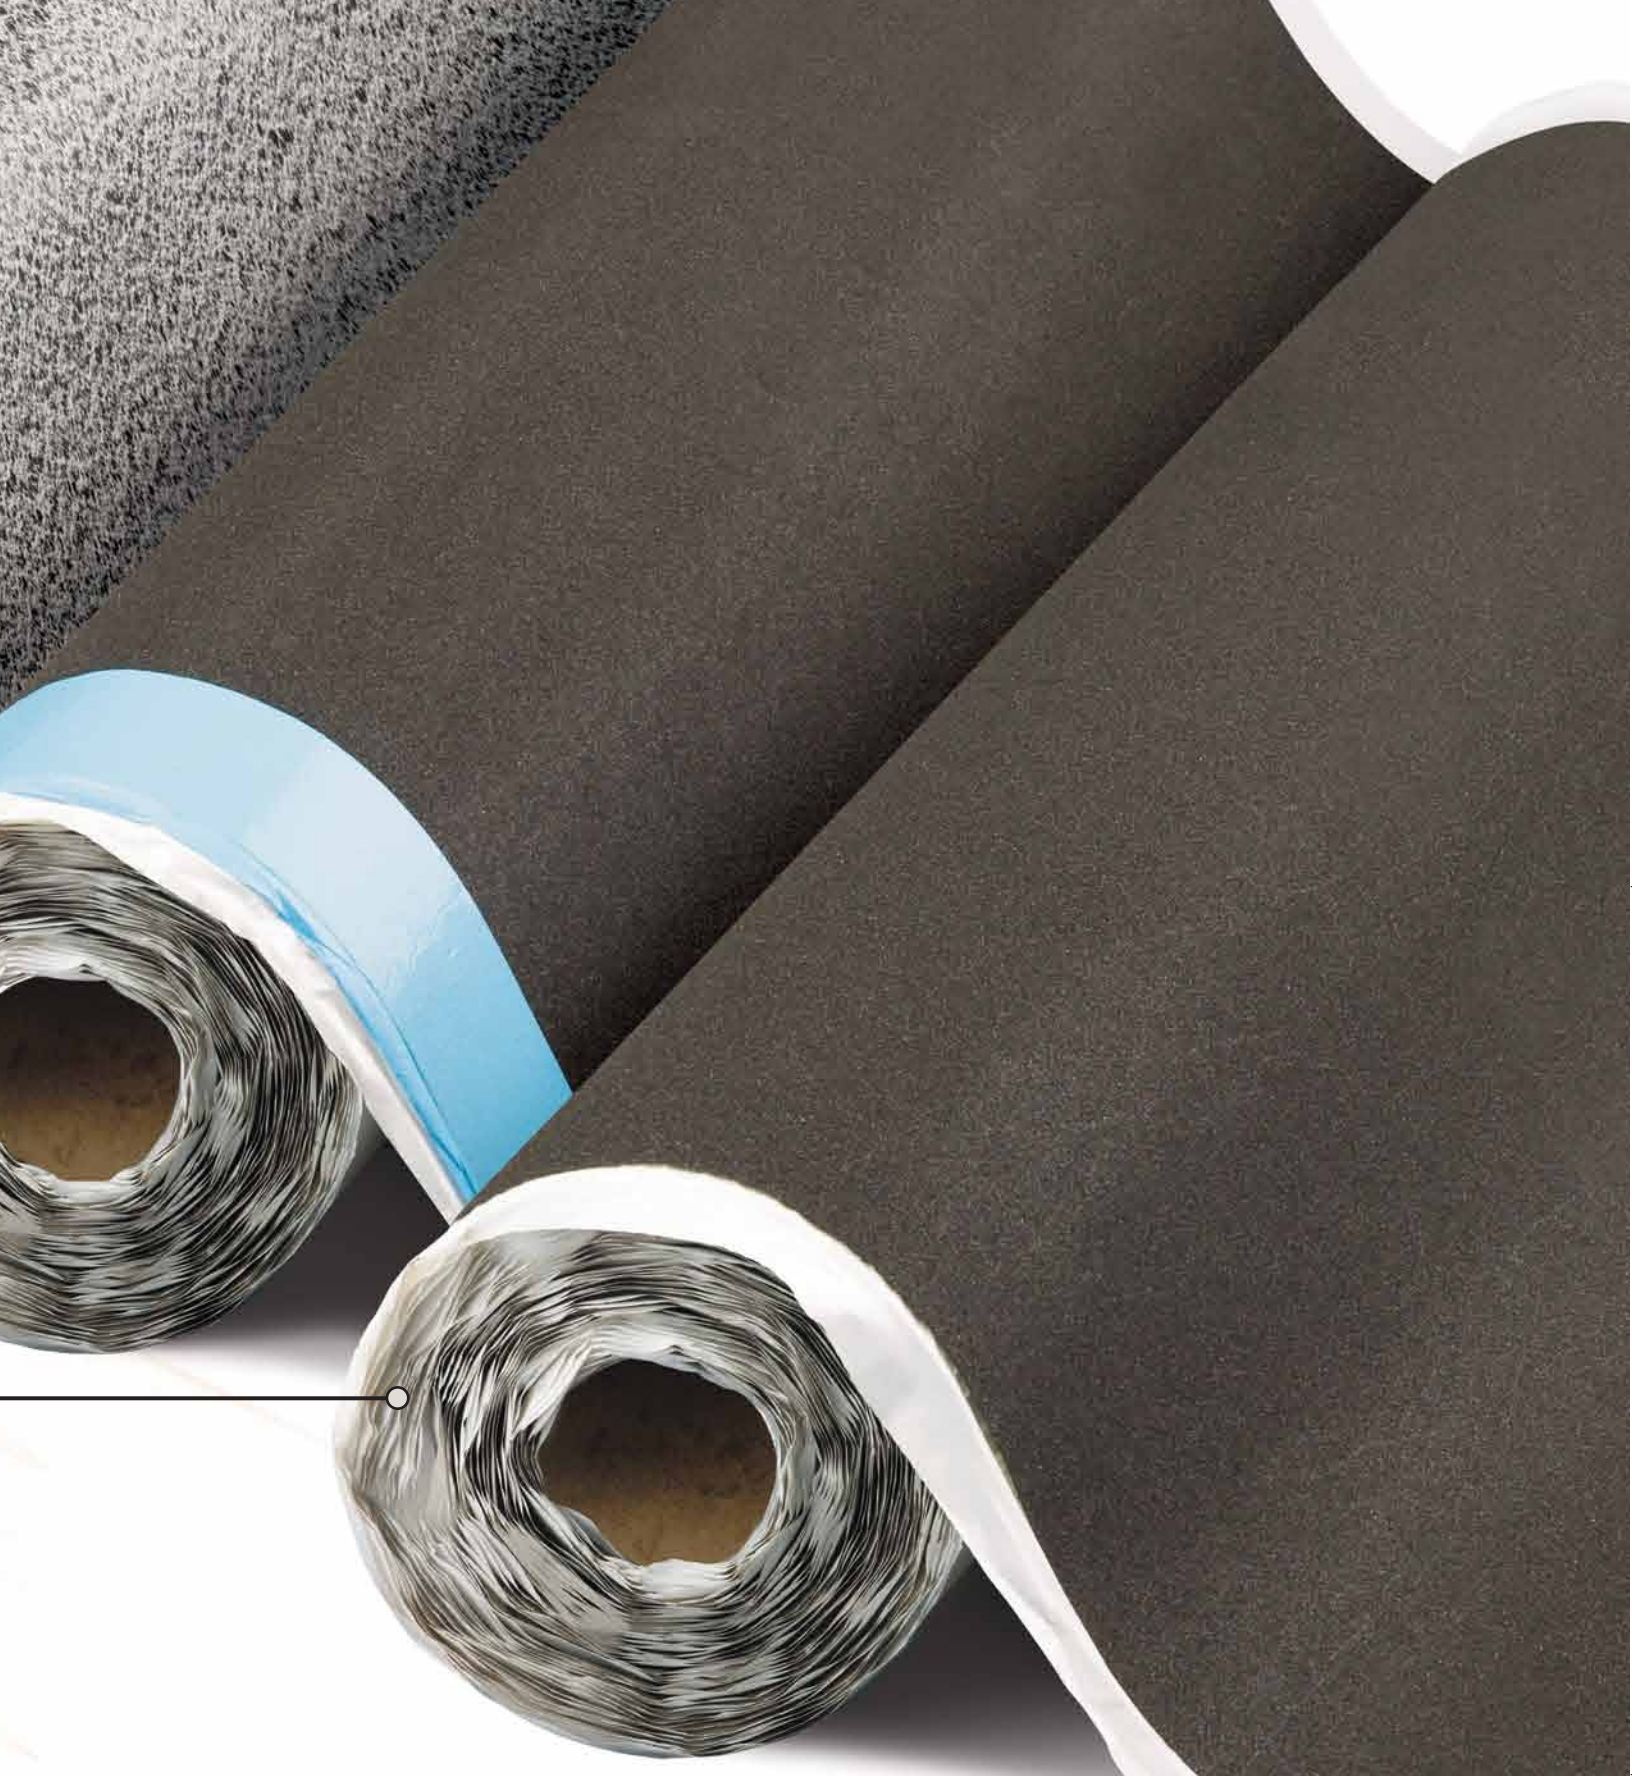

A modern roof deserves a modern underlayment. Self-sealing MFM Wind & Water Seal protects the entire roof and is ideal for use under metal, tile and shingles. Textured polymer surface offers secure, slip-resistant footing during installation. A quality, multi-purpose underlayment where ice, high wind, and heavy rain are anticipated, the white color of MFM Wind & Water Seal allows for cooler, more comfortable installation when applying it to the roof.

IB-4™

This superior "StormStopper" underlayment creates a secondary water barrier when installed across the entire roof, and provides excellent ice dam and blowing rain protection. Its specially formulated, self-adhesive, rubberized asphalt adhesive self-seals around nails and fasteners. The centered perforations on the release film make for a quick, easy installation in valley areas, and the adhesive selvage edge provides a secure seal at overlaps creating a water-tight roof deck installation.

IB-3™

An economical waterproofing underlayment featuring a granulated surface that keeps ice dams and blowing rain from entering the structure. The self-adhesive backing forms a strong bond to the roof deck, and the tough, rubberized asphalt self-seals around nails and fasteners. The release film has a centered perforation that makes for a very easy installation in valley areas. A rugged and time-tested product in cold, rainy climates where ice dams can quickly occur, no wonder professionals call it The Ice Buster!

Product	Width	Length	Color	Minimum Thickness
Premium Wind & Water Seal Premium underlayment for use with all metal, shingle, or tile roofs. Provides excellent secondary leak protection if the main roof covering is damaged. Slit release film eases installation and a textured polymer surface provides improved traction.	36"	75'	Black	40 mils
MFM Wind & Water Seal Self-adhering polymer underlayment excellent for use under tile, metal and shingles. Slit release film for ease of installation. Self-seals around fasteners. Textured film surface for traction plus white surface for cooler, more comfortable installation.	36"	67'	Black/White	40 mils
IB-4 Self-adhering underlayment designed for full roof protection. Excellent for use under shingles, concrete and clay tile roofing. Perforated release sheet for ease of installation. Granular surface with sealing edge for water-tight installation. May be left exposed for up to 360 days.	36"	67'	Black	60 mils
IB-3 Self-adhering underlayment prevents damage from ice dams and wind-driven rain. Ideal for use in valleys and other problem areas. Perforated release sheet for ease of installation. Granular surface.	36" 36"	67' 75'	Black Black	50 mils 50 mils

MFM products are protected under U.S. Patent Nos. 4,936,938; 5,096,759; 5,142,837; 6,103,356; 6,479,119; 6,627, 017.

MFM underlayments are all tested to ASTM D 1970 and most are Florida Building Code approved, Miami-Dade County Product Control Approved, ICC ES listed and UL Classified. Please consult each product's Technical Data Sheet for specific approval information.
